

Cardiovascular Research Study On Blood Pressure and Cholesterol

We're enrolling participants for a clinical study of an investigational oral medication to see how it affects your blood pressure throughout the day. The study drug may also reduce cholesterol and could potentially offer a more convenient and affordable alternative to injections currently on the market.

Key Eligibility Criteria

- ✓ At least 18 years old
- ✓ History of heart attack, stroke, or poor leg circulation, OR CVD risk factors like Type 2 Diabetes and/or Obesity
- ✓ High cholesterol (LDL of 70 or higher)
- ✓ Not taking medications such as Repatha, Praluent, Leqvio
- ✓ Not working night or rotating shifts
