

Caring For Your Heart with Heart Failure Research

Join Our Study

<Study Site> is conducting a clinical research study to compare the effectiveness of an investigational medication to a placebo (dummy medication with no active ingredients) in people with heart failure and inflammation.

You may qualify to participate if:

- You are 18 years old and older.
- You have been diagnosed with heart failure.
- You have reduced or preserved Left Ventricle Ejection Fraction as determined by a heart ultrasound that measures how well your heart is pumping blood

Other criteria will be evaluated to see if you may be eligible.

Participants may receive investigational medication and study-related medical care at no cost, plus a chance to contribute to research that could help others like you. Compensation may also be provided.
