

A photograph of an elderly African American couple embracing outdoors. The woman, on the left, has short, curly grey hair and is wearing a dark green top. The man, on the right, has a white beard and is wearing a blue sweater over a light blue collared shirt. They are both smiling warmly at each other. The background is a soft-focus outdoor setting with trees and foliage.

Stroke Prevention Research Study For Patients with Atrial Fibrillation

.....

We invite you to participate in a clinical research study of an investigational medication for individuals with atrial fibrillation (AFib). The study will test a once-monthly injection of a new study medication to see if it helps prevent strokes in individuals with atrial fibrillation who are not good candidates for oral blood thinners.

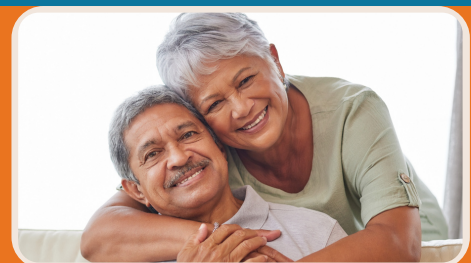

To qualify, individuals must meet the following criteria:

- Age 65 or older.
- Diagnosed with atrial fibrillation.
- Not eligible for oral blood thinners.
- Not a candidate for left atrial appendage closure (Watchman Device).

Additional criteria will be evaluated to determine eligibility.

Qualified participants may receive investigational medication or placebo and study-related medical care at no cost, plus a chance to contribute to research that could help others like you. Compensation of \$100 for each study visit completed may also be provided.
