CHRONIC CARE MANAGEMENT

Your cardiologist participates in the new Chronic Care Management (CCM) program!

CHRONIC CARE MANAGEMENT (CCM)

This is a new government program for Medicare patients. You may be eligible to participate in these additional benefits to help manage your chronic conditions. With the CCM Program, your doctor is able to spend more time on your care - even when you aren't in the office. Chronic conditions are ongoing medical problems like diabetes, high blood pressure, heart disease, hyperlipidemia, and many others. These conditions must be managed effectively in partnership between the healthcare team and patient to maintain the best possible overall health and wellness.

WHAT ARE THE BENEFITS OF SIGNING UP FOR CCM SERVICES?

- Coordinated care between specialists, testing centers, and hospitals to make sure everyone is working together.
- Chart review in advance of every visit to identify issues that should be discussed and addressed.
- Review and oversight of medications.
- Follow up after each visit to make sure you're feeling well and that your medications are working.
- Assistance with scheduling preventative care services, many of which are covered by Medicare.
- More personalized attention to your health management goals.
